

■# Nutritional Insights Dashboard (Phase 2)

Live frontend: <https://gentle-bush-041c4050f.7.azurestaticapps.net/>

Backend function (example): https://rishabh-diet-function-2026-crh8cfbxfhhybmf4.mexicocentral-01.azurewebsites.net/api/get_nutritional_insights

Repo: <https://github.com/Saron-web/Project2.git>

Quick test (local):

python -m http.server 8000 --directory fronted

open <http://localhost:8000> and click "Get Nutritional Insights"

Sample request:

GET /api/get_nutritional_insights?dietType=keto

Sample (trimmed) response:

```
{
  "barData": {"labels": ["Protein", "Carbs", "Fat"], "values": [25.5, 50.2, 18.3]},
  "scatterData": {"points": [{"x": 25.5, "y": 50.2}]},
  "pieData": {"labels": ["Vegan", "Keto"], "values": [100, 150]},
  "executionTime": "1.23ms"
}
```

Required Function App settings (set in Azure Portal):

- AZURE_STORAGE_CONNECTION_STRING
- AZURE_STORAGE_CONTAINER_NAME
- AZURE_STORAGE_BLOB_NAME (if used)

CORS: Confirm the static app origin is allowed in the Function App Allowed Origins.

Submission blurb (paste into form):

The frontend is deployed at <https://gentle-bush-041c4050f.7.azurestaticapps.net/> and calls the Azure Function at https://rishabh-diet-function-2026-crh8cfbxfhhybmf4.mexicocentral-01.azurewebsites.net/api/get_nutritional_insights. Repo: <https://github.com/Saron-web/Project2.git>. See this README for quick test steps. Screenshots can be provided on request.
